| <p>1) It takes two apples to make an apple pie. If a chef bought nine apples, the last pie would need how many more apples?</p>   | <p><math>9 \div 2 = 4 \text{ r}1</math></p>  | <p>1. _____</p>  |
| <p>2) Frank had thirty-two pieces of candy. If he wants to split the candy into seven bags with the same amount of candy in each bag, how many more pieces would he need to make sure each bag had the same amount?</p> | <p><math>32 \div 7 = 4 \text{ r}4</math></p> | <p>2. _____</p>  |
| <p>3) A coat factory had forty-seven coats. If they wanted to put them into seven boxes, with the same number of coats in each box, how many extra coats would they have left over?</p>                                 | <p><math>47 \div 7 = 6 \text{ r}5</math></p> | <p>3. _____</p>  |
| <p>4) Dave's dad bought nine meters of string. If he wanted to cut the string into pieces with each piece being two meters long, how many full sized pieces could he make?</p>  | <p><math>9 \div 2 = 4 \text{ r}1</math></p>  | <p>4. _____</p>  |
| <p>5) An industrial machine can make twenty-nine crayons a day. If each box of crayons has nine crayons in it, how many full boxes does the machine make a day?</p>   | <p><math>29 \div 9 = 3 \text{ r}2</math></p> | <p>5. _____</p>  |
| <p>6) There are fourteen people attending a luncheon. If a table can hold four people, how many tables do they need?</p>  | <p><math>14 \div 4 = 3 \text{ r}2</math></p> | <p>6. _____</p>  |
| <p>7) A store owner had four employees and bought thirty uniforms for them. If he wanted to give each employee the same number of uniforms, how many more should he buy so he doesn't have any extra?</p>               | <p><math>30 \div 4 = 7 \text{ r}2</math></p> | <p>7. _____</p>  |
| <p>8) A machine in a candy company creates nineteen pieces of candy a minute. If a small box of candy has two pieces in it how many full boxes does the machine make in a minute?</p>                                   | <p><math>19 \div 2 = 9 \text{ r}1</math></p> | <p>8. _____</p>  |
| <p>9) Tom is trying to earn fifty-eight dollars for some new toys. If he charges seven dollars to mow a lawn, how many lawns will he need to mow to earn the money?</p>   | <p><math>58 \div 7 = 8 \text{ r}2</math></p> | <p>9. _____</p>  |
| <p>10) Adam bought seventeen pieces of candy to give to three of his friends. If he wants to give each friend the same amount, how many pieces would he have left over?</p>   | <p><math>17 \div 3 = 5 \text{ r}2</math></p> | <p>10. _____</p> |

Use the completed division problem to answer the question.

- 1) It takes two apples to make an apple pie. If a chef bought nine apples, the last pie would need how many more apples?  $9 \div 2 = 4 \text{ r}1$
- 2) Frank had thirty-two pieces of candy. If he wants to split the candy into seven bags with the same amount of candy in each bag, how many more pieces would he need to make sure each bag had the same amount?  $32 \div 7 = 4 \text{ r}4$
- 3) A coat factory had forty-seven coats. If they wanted to put them into seven boxes, with the same number of coats in each box, how many extra coats would they have left over?  $47 \div 7 = 6 \text{ r}5$
- 4) Dave's dad bought nine meters of string. If he wanted to cut the string into pieces with each piece being two meters long, how many full sized pieces could he make?  $9 \div 2 = 4 \text{ r}1$
- 5) An industrial machine can make twenty-nine crayons a day. If each box of crayons has nine crayons in it, how many full boxes does the machine make a day?  $29 \div 9 = 3 \text{ r}2$
- 6) There are fourteen people attending a luncheon. If a table can hold four people, how many tables do they need?  $14 \div 4 = 3 \text{ r}2$
- 7) A store owner had four employees and bought thirty uniforms for them. If he wanted to give each employee the same number of uniforms, how many more should he buy so he doesn't have any extra?  $30 \div 4 = 7 \text{ r}2$
- 8) A machine in a candy company creates nineteen pieces of candy a minute. If a small box of candy has two pieces in it how many full boxes does the machine make in a minute?  $19 \div 2 = 9 \text{ r}1$
- 9) Tom is trying to earn fifty-eight dollars for some new toys. If he charges seven dollars to mow a lawn, how many lawns will he need to mow to earn the money?  $58 \div 7 = 8 \text{ r}2$
- 10) Adam bought seventeen pieces of candy to give to three of his friends. If he wants to give each friend the same amount, how many pieces would he have left over?  $17 \div 3 = 5 \text{ r}2$
