

Solve each problem.

1)  $\frac{7}{8} - \frac{6}{9} =$

2)  $\frac{2}{3} + \frac{2}{6} =$

3)  $\frac{5}{7} - \frac{3}{8} =$

4)  $\frac{4}{8} + \frac{2}{7} =$

5)  $\frac{6}{9} - \frac{1}{2} =$

6)  $\frac{4}{8} + \frac{1}{2} =$

7)  $\frac{5}{7} - \frac{5}{8} =$

8)  $\frac{2}{3} + \frac{1}{2} =$

9)  $\frac{6}{7} - \frac{2}{4} =$

10)  $\frac{2}{4} + \frac{1}{5} =$

Solve each problem.

1)  $\frac{7}{8} - \frac{6}{9} = \frac{63}{72} - \frac{48}{72} = \frac{15}{72}$

2)  $\frac{2}{3} + \frac{2}{6} = \frac{12}{18} + \frac{6}{18} = \frac{18}{18}$

3)  $\frac{5}{7} - \frac{3}{8} = \frac{40}{56} - \frac{21}{56} = \frac{19}{56}$

4)  $\frac{4}{8} + \frac{2}{7} = \frac{28}{56} + \frac{16}{56} = \frac{44}{56}$

5)  $\frac{6}{9} - \frac{1}{2} = \frac{12}{18} - \frac{9}{18} = \frac{3}{18}$

6)  $\frac{4}{8} + \frac{1}{2} = \frac{8}{16} + \frac{8}{16} = \frac{16}{16}$

7)  $\frac{5}{7} - \frac{5}{8} = \frac{40}{56} - \frac{35}{56} = \frac{5}{56}$

8)  $\frac{2}{3} + \frac{1}{2} = \frac{4}{6} + \frac{3}{6} = \frac{7}{6}$

9)  $\frac{6}{7} - \frac{2}{4} = \frac{24}{28} - \frac{14}{28} = \frac{10}{28}$

10)  $\frac{2}{4} + \frac{1}{5} = \frac{10}{20} + \frac{4}{20} = \frac{14}{20}$
