

Use the visual model to solve each problem.

 $\frac{2}{4} \times 3 =$

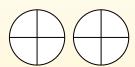

To solve multiplication problems with fractions one strategy is to think of them as addition problems.

For example the problem above is the same as:

$$\frac{2}{4} + \frac{2}{4} + \frac{2}{4}$$

 $\overline{\frac{2}{4} \times 3} =$

If we shade in 2/4 on the fractions below 3 times we can see a visual representation of the problem.

 $\frac{2}{4} \times 3 = 1 \frac{2}{4}$

After shading it in we can see why 2/4 three times is equal to 1 whole and $\frac{2}{4}$.
