

Solve each problem.

Answers

- 1) Gwen was planting vegetables in her garden. She started with sixty seeds and planted forty-eight of them in the big garden and in each of her small gardens put three seeds each. How many small gardens did Gwen have?
- 2) Bianca had fifty-six homework problems. She finished thirty-two of them but still had three pages of problems to do. If each page has the same number of problems on it, how many problems are on each page?
- 3) Oliver was selling his old games. He started out with sixty-three but sold fifteen of them. He packed the rest up putting eight games into each box. How many boxes did he have to use?
- 4) A company invited fifty-three people to a luncheon, but twenty-five of them didn't show up. If the tables they had held four people each, how many tables do they need?
- 5) Isabel's team won their baseball game and scored one hundred three points total. If Isabel scored forty-seven of the points and everyone else scored eight points each, how many players were on her team?
- 6) Robin had fifty files on her computer. She deleted twenty-six of them and put the rest into folders with six files in each one. How many folders did Robin end up with?
- 7) A store had forty-seven coloring books in stock. They ended up putting them on sale and getting rid of twenty-seven of them. They put the ones they still had onto shelves with four on each shelf. How many shelves did they use?
- 8) Adam is at the library helping put away books. There are one hundred book to put away total but a librarian takes thirty-seven of them and leaves Adam with the rest. If he can fit nine books on a shelf, how many shelves will he need?
- 9) A pet store had fifty-five puppies. In one day they sold forty-five of them and put the rest into cages with five in each cage. How many cages did they use?
- 10) For Halloween Sarah received fifty-three pieces of candy. She ate eight pieces then placed the rest into piles with five in each pile. How many piles could she make?
