Two Step Problems

Name:

Solve each problem.

1) Billy had seven action figures, but needed fourteen total for a complete collection. If each one costs $five, how much money would he need to finish his collection?

1. _____

2) At a restaurant each adult meal costs $seven and kids eat free. If a group of twelve people came in and three were kids, how much would it cost for the group to eat?

2. _____

3. _____

3) Victor had eight video games but two of them weren't working. If he wanted to sell the working games for $five each, how much money could he earn?

4. _____

5. _____

4) April's discount flowers was having a sale where each rose was two dollars. If April started with sixteen roses and had eight roses left, how much money did she earn?

6. _____

7. _____

5) In a video game, each enemy defeated gives you eight points. If a level has fifteen enemies total and you destroy all but seven of them, how many points would you earn?

8. _____

9. _____

6) George bought seven boxes of chocolate candy and gave four to his little brother. If each box has eight pieces inside it, how many pieces did George still have?

10. _____

7) Each chocolate bar in a box cost $two. If a box had ten bars total and Bianca sold all but six bars, how much money would she have made?

8) John invited eleven friends to a birthday party, but five couldn't come. If he wanted to buy enough cupcakes so each person could have exactly nine, how many should he buy?

9) At the fair Frank bought eight tickets. After riding the ferris wheel he had three tickets left. If each ticket cost two dollars, how much money did Frank spend riding the ferris wheel?

10) Paige earned six points for each bag of cans she recycled. If she had sixteen bags, but didn't recycle nine of them, how many points would she have earned?
